ROLE OF PHARMACIST ON GLOBLE HEALTH

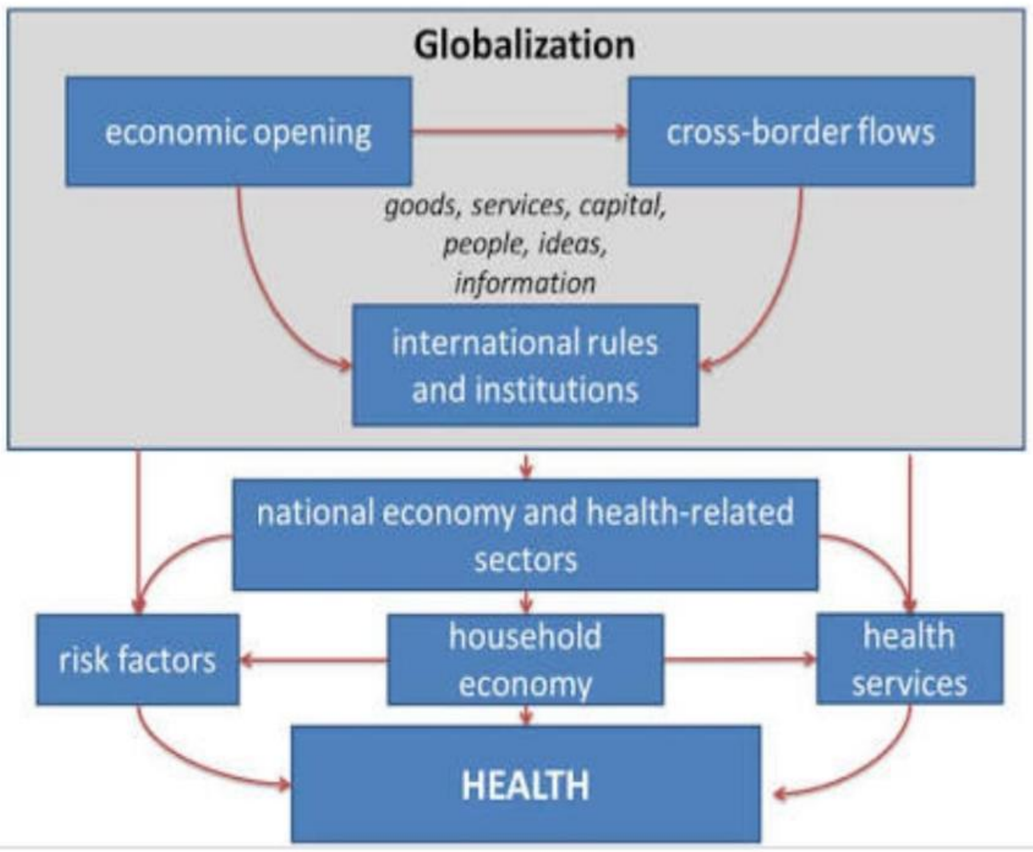
College Name: Ali-Allana College of Pharmacy, Akkalkuwa, 425415, Nandurbar, Maharashtra, India

STUDENT NAME: KHAN NAYEEM AHAMAD RASHID AHAMAD

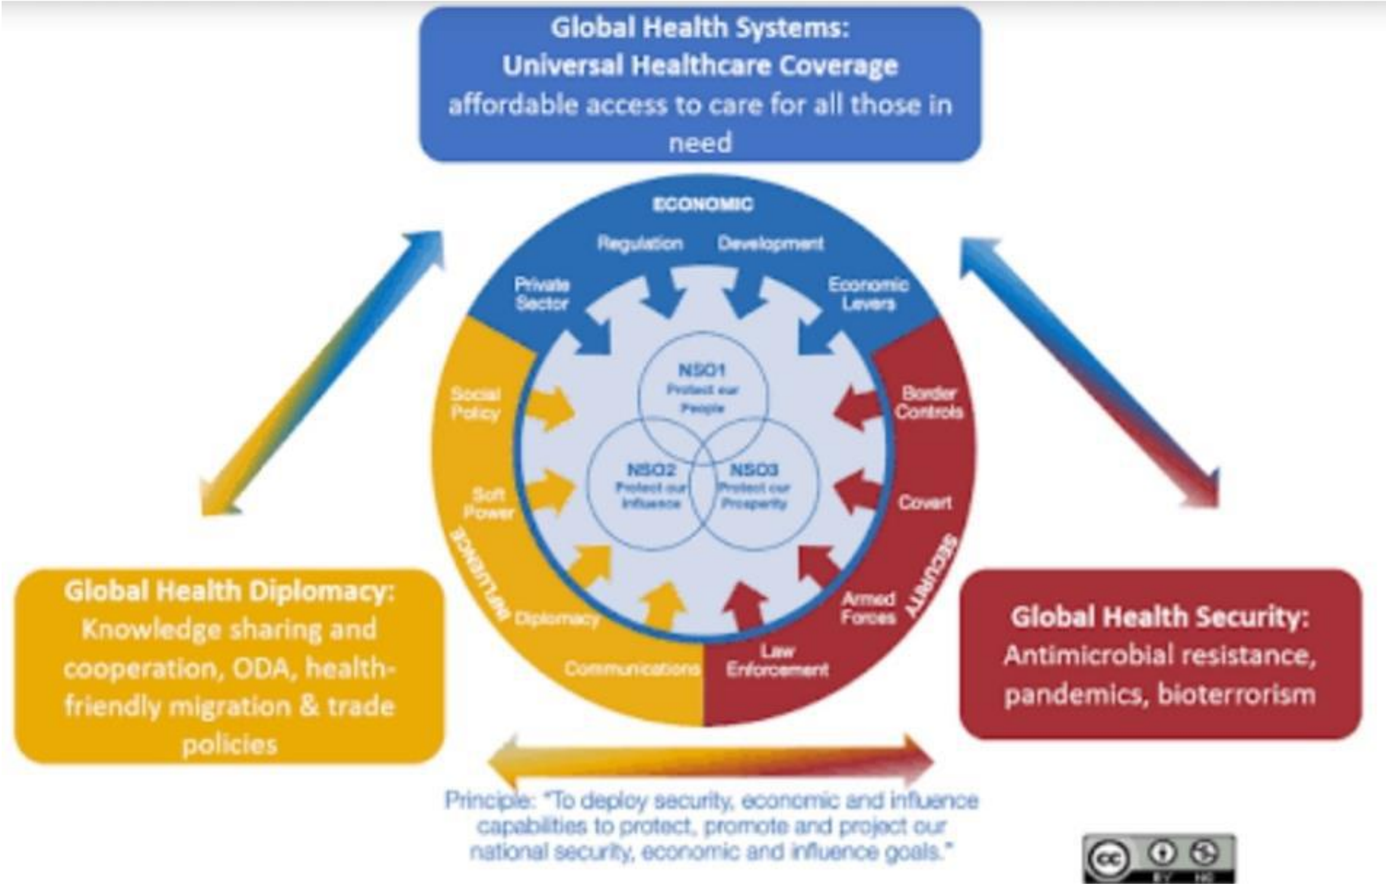
Abstract: global health and safety is the major goal of the 21st century and to achieve that great span of roles pharmacy profession involves now. The paper highlighted new roles of the pharmacist today in order to better understand the transition of the pharmacy profession.
Public health activities are performed at many levels from local to national to global. The organization and agencies devoted to public health at these different levels share many of the same function including disease surveillance, policy development.

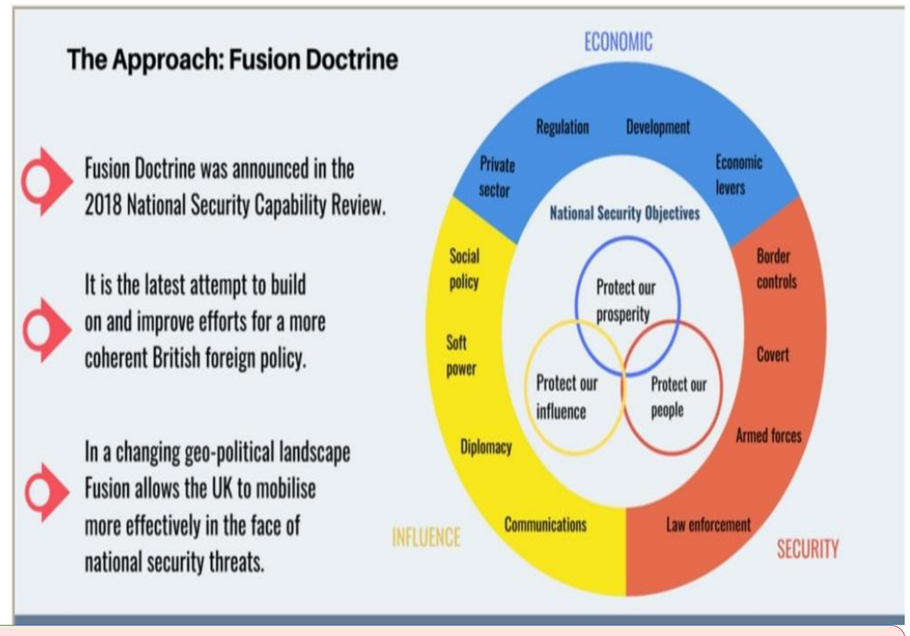
INTRODUCTION:
The presentation is for pharmacists, those working in the pharmaceutical industry and pharmaceutical policy makers ,but is also suitable for anyone interested in how pharmacy can impact global health. It equips students to apply their specialist knowledge and skills to make a unique contribution to improving health worldwide.
However two billion people worldwide, primarily in resource-poor settings, do not have access to the most basic medicines, and the pharmacy workforce is underutilized where disease burden is highest. In this presentation we explore the impact of pharmacists and pharmaceuticals on the health of the world's population, with a focus on the avoidable health differences experienced by many people globally.

What is global pharmacy and Role of pharmacists in global health:
Global health focuses on prevention in populations and clinical care in individuals and promoting health equity among people on a global scale.
Community pharmacies play an important role in the early detection of cancer (NHS England 2013). There is increasing collaboration between community pharmacist and general practitioners (GPs).Pharmacists also manage clinics for chronic diseases such as human. The global health system is aimed to go through significant changes in the
future to remain economically viable.



Life Cycle of Global Health:





CONCLUSION:
Pharmacists have the potential to play an important role in both public and global health by providing information and advice on the therapeutic use of medicines. Clinical pharmacists play a big part in the multidisciplinary and interdisciplinary global health. Community pharmacist plays a crucial role in the management of chronic diseases such as asthma, arthritis, palliative care and pain, cardiovascular disease, diabetes and hypertension.
The role of pharmacists is changing continuously to meet the local needs throughout the world. This can be seen through the shifting from product-centre services to patient centered services.
pharmacists also play a significant role in pneumococcal vaccination. Besides, pharmacists are important in drug therapy management and ensuring the safe and appropriate medication use to reduce healthcare cost. Lastly, the pharmacist.
